

Your network, your way

The freedom to choose the right SD-WAN configuration for your multi-cloud and hybrid IT environments

With more flexibility, you can deploy SD-WAN anywhere and manage the network, security, and services on your terms

1 Mix & Match your network access

Masergy SD-Network

Connect to the world's leading secure cloud networking platform — it's private, global, and entirely software-defined

DIA/Broadband

Get stable, dedicated internet access and supercharge your broadband connection with Performance Edge

LTE/5G

Accelerate your deployment with wireless access and leverage 5G for reliable backup bandwidth

Masergy-provisioned internet

Choose from 300 access providers to ensure you get the global connectivity you need and Masergy will manage it all — both public and private

BYONetwork

Bring your own network or existing third-party private bandwidth and Masergy will handle the rest

2 Connect your cloud apps & services

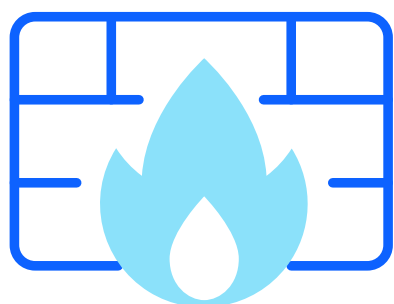

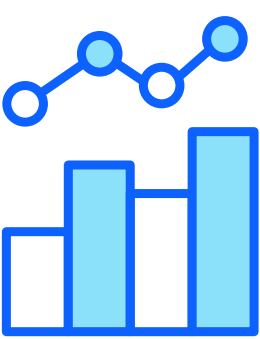

Link to an array of private and public cloud resources and get 100% service availability, active-active configurations, and intelligent application routing.

SaaS Applications (200+)

Cloud Services (10+)

3 Secure your environment

Choose the security service that matches your desired level of protection and support.

Unified Threat Management

Threat Monitoring & Reporting

24/7 Managed Security Services

SASE Security Solutions

4 Manage it all in one place, on your terms

Managed SD-WAN Secure

Opt for fully managed SD-WAN services and Masergy's own NOCs and SOCs will monitor and manage your network and security services 24/7.

- Masergy is known for an average 65 NPS
- NOC analysts guide you in making informed decisions
- SOCs located on three continents

Co-Managed SD-WAN

Share the work of managing your network and firewalls with Masergy. With co-managed services, you can use self-service controls to drive changes to the network, bandwidth, and security policies, all with end-to-end visibility into performance.
