

6

Takeaways from Black Hat '21

The leading event for the infosec community explores the key security challenges every IT leader should know

1

Zero Trust is not always possible

With supply chain attacks, Zero Trust isn't always possible with mobile phones

2

Zero-day exploits have doubled

Offense has taken the gloves off — hackers are already inside

3

Evading detection is easy

With Microsoft® Office 365, bad actors can evade detection with just a few clicks

Office 365

4

New technologies make attacks automated

Deepfakes and GPT3 make the job of the cyber criminal easier than ever

5

Cryptocurrency is making ransomware worse

Ransomware is up 150+% and cryptocurrency gives bad actors financial and personal anonymity

6

Social engineering still #1

Mass solicitations are turning willing and unwilling users into threats against their own companies

Cybersecurity threats now

6 Eye openers from Black Hat every IT leader should know
